PROFESSIONAL SUMMARY

Recent BS Computer Science graduate with a strong object-oriented programming foundation and hands-on experience designing back-end services, REST APIs, and relational database schemas. Comfortable across Java and Python, and quick to pick up new frameworks and tools — currently building a Django REST Framework backend with JWT authentication as a self-directed project. Looking to bring a solid CS foundation and fast learning curve to an Associate Software Engineer role focused on clean, scalable back-end development.

TECHNICAL SKILLS

Languages	Java (intermediate), Python (intermediate), C/C++, C#
Back-End & APIs	REST API design and integration, Django REST Framework, JWT authentication, JSON
Object-Oriented Design	OOP fundamentals, building understanding of design patterns and clean architecture through active project work
Databases	SQL, MySQL (intermediate), PostgreSQL, relational schema design
Tools & Testing	Git, GitHub, Postman (API testing), Linux (basic), Docker (basic)

RELEVANT COURSEWORK

Object-Oriented Programming • Data Structures & Algorithms • Design & Analysis of Algorithms • Software Engineering Concepts • Database Systems • Operating Systems • Computer Networks

PROJECTS

StudyMate AI — Django REST Backend with JWT Auth

Ongoing Personal Project

- Designing and building a production-style back-end service (Django + Django REST Framework) with token-based authentication and per-user data isolation.
- Implemented a Document API (model, serializer, viewset) where the queryset is filtered server-side so users can only ever access their own records — verified with authenticated and unauthenticated requests.
- Built and tested API endpoints end-to-end using Postman/curl, including token issuance, refresh, and protected-route behavior (401 on missing/invalid tokens).
- Actively extending the project with a retrieval-based AI layer, applying clean separation of concerns between models, serializers, and views.

E-Testing System — Web-Based Online Examination Platform

Final Year Project

- Designed system architecture and back-end logic for a full-stack exam platform, applying OOP structure to keep the codebase maintainable.
- Designed the relational database schema and wrote SQL queries for exam, user, and result data.
- Built and integrated REST API endpoints connecting front end and back end.
- Diagnosed and fixed a cross-tab timer-sync bug through methodical debugging (sessionStorage + server-side timestamp validation).
- Used Git for version control and collaborated with a small project team.

Student Manager — Python CLI Application

Personal Project

- Built a command-line student management tool in Python using functions, lists, and dictionaries with JSON persistence.

EDUCATION

LANGUAGES

English (Fluent) · Urdu (Fluent) · Pashto (Native) · German (Basic) · Arabic (Basic)

AVAILABILITY

Available immediately for full-time, onsite work in Lahore.
